**COURSE OUTCOME:** The course provided both theoretical knowledge as well as hands on experimental training to students on collecting and analyzing water samples from different sources (ponds, municipal water taps, tube wells etc.). After completion of the course the students gained awareness of the chemical contaminants of ground water and their related health hazards. They also had hands on training in identifying and estimating chemical polutants of ground water. The feedback form analysis shows that most of the students were extremely satisfied with the theoritical knowledge and experimental traing provided by te course.

Details of the course content and program schedule are provided below.

## Value added course on WATER POLLUTION AND ANALYSIS

## Course Objectives

To impart job oriented skill through hands on experience of water testing and quality assessment.

### **Course Contents**

Day 1:Theoretical classes on water resources, water cycles, causes of water pollution and related health hazards and theoretical principles of water analysis.

Day 2: Collection of water from different sources

Day3: Theoretical classes on principle of measurement of total hardness and its removal, and measurement of pH of water.

Laboratory classes on water testing for (a) Hardness of water (b) total nitrogen content of water

(Nitrates, nitrites and ammonium content) (b) Measurement of pH

Day 4: Theoretical classes on the principle of testing Arsenic content of water and its related health hazard

Laboratory classes on measurement of (a) arsenic content of water (b) BOD and Dissolved oxygen of water.

**Day 5:** Assessment of students through viva and written tests.

## **Course Outcomes**

At the completion of the course the students should be:

- (a) Aware of the various pollutants that can contaminate ground and surface water and their related health hazards
- (b) Able to analyze chemical pollutants of water
