National Technology Day

What is Artificial Intelligence ?

Artificial intelligence (AI) pertains to the advancement of computer systems capable of executing tasks that traditionally demand human intelligence, including:

1. Learning
2. Problem-solving
3. Reasoning
4. Perception
5. Language understanding

AI systems use algorithms and data to make decisions, often without human intervention. They can be designed to perform a wide range of tasks, such as:

1. Image and speech recognition
2. Natural Language Processing (NLP)
3. Expert systems
4. Robotics
5. Predictive analytics

How it works ?

Future of AI

AI will be applied to new domains like climate change, agriculture, and urban planning, leading to innovative solutions and improvements.
